WalkAbout

Universal Soft Tissue Formula

A natural food supplement for dogs.

***WalkAbout* works where others won't!**

Pet's love the taste! You'll love the results!

Stabilize and regenerate tendons, ligaments, joints, joint cartilage and connective tissue the natural way with WalkAbout Universal Soft Tissue Formula.

A completely natural blend of ingredients guaranteed to give you optimum results in vitality, performance, and full range mobility. Whether your dog is young, middle aged, or in their golden years you will be amazed at the results. WalkAbout has a 100% money back, satisfaction guarantee. WalkAbout is a 100% pure complex of natural active ingredients that was selectively developed for strengthening, stabilizing and regenerating connective soft tissue structures and relieving arthritis. Dogs love the taste. Just put it on their food. In three to six weeks your dog will look and feel better than you ever thought possible.

Maintain healthy connective tissue with WalkAbout

Connective tissue structures such as ligaments, tendons, synovial fluid, capsules, joints and auricle/ear cartilage often tend to go through negative changes. This is an unavoidable condition of everyday life. Running, playing, working, diet, genetics and age all contribute to these conditions. Even puppies and young dogs may show clear signs of pain and limited locomotive capability.

From a nutritional aspect, biochemical imbalances in the basic structure of a dogs connective tissue can cause limited mechanical movement. Pain and inflammation in the joints is often caused or increased by improper nutrition. These conditions of destroyed tissue structures eventually lead to arthritis. The interaction of the natural ingredients found in WalkAbout effectively deal with this situation by simply providing the missing nutrients required for repairing soft tissue.

Dogs will be more resistant to injuries and recovery time from injuries will be shorter. Ears will stand properly in breeds such as German Shepherds, Bull Terriers, etc. Vital nutrients will be supplied to fetuses in the third and final stages of a bitches pregnancy giving them the best chance to form excellent connective tissue structures. Performance will be increased in training, exhibition, hunting and competition.

Owners also report improved coat condition, alleviation of incontinence due to old age, and an overall joyful attitude due to just feeling better. The optimum interaction of the natural substances in WalkAbout guarantee the highest degree of bioavailability.

WalkAbout is 100% money back guaranteed to work as described when the proper amount is given. Results will normally be apparent in 4 to 6 weeks. Each dog is different, some conditions will respond very quickly while others may require more time.

WalkAbout food supplement for dogs contains:

- 20% New Zealand shell meat extract (Perna Canaliculus)
 - Kelp/algae (ascophylum and spirulina)
 - Malt mixture
 - Gelatins (from poultry)
 - Brewers yeast
 - Kieselghur (diatomaceous silica)
 - Horsetail (Equisetum)
 - DL methionine (amino acid)
- WalkAbout promotes cell metabolism of the joint cartilage through a special mixture of B vitamins found in brewers yeast, malt and high portions of glucose, maltose and fructose.
 - Shell meat extract of Perna Canaliculus ensures that connective tissue and joint cartilage have the optimum supply of glycosaminoglycans, chondroitin-4 and -6 sulfate, heparin, heparan sulfate and omega 3 fatty acids.
 - Kieselguhr provides biologically valuable silicic acid. In addition amino acids, gelatins and algae's are important components of WalkAbout , providing quick sources of necessary sulphur.

Recommended use is calculated on a per day basis. Amounts should be doubled for the first 14 days if any serious problems are present. The initial repair of a soft tissue injury will require more WalkAbout than is necessary to maintain long term relief of the same damaged soft tissue. After 6 months of continuous use recommended amounts may often be reduced and short breaks off the product may be taken. If a regression is apparent merely increase the amount to the level previously used.

The enclosed level scoop equals 5 grams. For reference 1 level tsp. equals 4 grams. Introduce slowly over a 5 day period. Do not worry about being precise with the recommended amounts as it would be very difficult to give too much WalkAbout.

10 to 25 lbs.	1/2 to 1 scoop.	Analysis: 31% crude protein 2.3% crude fat 19% crude ash 2.5% crude fiber 1.7% DL methionine
25 to 45 lbs.	1 to 2 scoops.	
46 to 65 lbs.	2 to 3 scoops.	
66 lbs to 170 lbs.	3 to 4 scoops.
